Constellation's Backup Generation Solutions

The affordable reliability solution you need now—with no upfront capital required. Turn a budget challenge into a budget solution.

Situation

The power goes out and your business is left in the dark. What does this outage mean for your business? Do you have lost revenue or damaged product? Unhappy customers? Safety concerns? It is critical to safeguard against this type of outage event, but all too often the required energy infrastructure can be prohibitively expensive, and reliability investments get lost among competing priorities.

Constellation's novel approach to backup generation helps solve the financial and operational hurdles that keep you from providing your business with the resilient power solution it requires.

Let Us Do the Work for You

Constellation's unique, no upfront capital solution gives you the backup power you need for less than the cost of buying and maintaining a system yourself. Constellation will install the system and monetize it in the energy markets, lowering the net costs to you for the reliability your facility needs. Constellation will also remotely monitor the system 24 x 7 x 365, pay for and perform maintenance, and manage refueling so that your staff is not burdened with any additional responsibility or operating expenses.

The pricing is straightforward. You pay a low reliability service fee as part of your electric or gas supply agreement with Constellation. Constellation pays for and owns the generation equipment, which eliminates the need for any upfront capital investment, avoids complicated capital approval processes, and protects your balance sheet. To lower the service fee as much as possible, Constellation bundles the system with a long-term electric supply agreement and monetizes the generator in the energy markets through demand-side programs such as peak shaving and demand response. This comprehensive energy solution delivers the reliability you need – enabling you to focus your resources and deploy capital on your core business.

America's energy choice.™

Benefits of Backup Generation Solutions

Enjoy Best-in-Class Reliability

Constellation works with equipment suppliers to deliver best-in-class generation—supported by extensive system design, data analytics and project experience so that you have peace of mind.

Simplify Implementation and Operations

Our turnkey, no-hassle approach minimizes impact on your operations during installation and throughout the term of your agreement. Constellation oversees permitting and installation, operates and maintains the equipment, manages refueling, and remotely monitors the system at all times. This lets you keep your staff focused on important core business operations instead.

Eliminate Capital Expenses

Constellation pays all upfront costs as well as any ongoing operational expenses. This allows you to avoid complex capital approval processes—so you can keep your capital focused on the business.

Mitigate Market Risk

By combining supply-side power procurement with demand-side management of the generator in various market-based programs such as demand response, Constellation will offset project costs and offer you a more attractive service fee. Constellation bears this volatile price risk, providing you with much needed budget certainty.

Work With a Trusted Energy Solutions Provider

At Constellation, we tailor our integrated energy solutions to your unique needs, providing you with the flexibility to choose how to cost-effectively buy, manage and use energy to meet your business goals. Along with our expertise, we offer a wide range of innovative and integrated distributed energy products—including solar, energy efficiency, cogeneration, backup generation, fuel cells, CNG fueling stations and battery storage—as well as the reach of one of the nation's leading competitive suppliers of power, natural gas, renewable energy and energy management products. With more than 30 years of experience and over \$1 billion in energy-related projects financed and built, we help business, nonprofit and public sector customers achieve sustainability goals, develop energy resiliency, manage costs and capital needs, and mitigate risk.
